

eMD for Breast Centers

specialized **EMR**

Enhanced Patient Management

eMD for Breast Centers is a highly flexible, browser-based application used by breast care professionals to effectively collect, store and review patient information. It allows multiple users to simultaneously analyze and report clinical outcomes from remote locations, while implementing HIPAA security and privacy compliance guidelines.

eMD for Breast Centers was designed by Breast Care surgeons/physicians for use in a breast center environment. The application is designed to collect standardized clinical data to allow for comparative analysis of benchmark and other pooled data. In addition, it supports the need for user-defined data elements unique to individual programs

eMD for Breast Centers is built around the following modules.

eMD Central, the base system, provides all the functionality in either single or multi-user environments, allowing physicians and clinical staff to access patient information via a standard web browser.

Breast Center Clinic provides functionality specific to the Surgeon/Physician and their staff. This functionality includes breast care terminology, processes, procedures, measurement criteria, and data elements.

Patient Portal module is a companion product to eMD Central. Patients have the ability to perform virtual visits as part of their ongoing care program providing day-to-day interaction with the patient.

eMD Mobile allows access, view, and update outcomes data using your smartphone, no need to be tethered to your desk. You have real time data wherever you are, an EMR in your pocket.

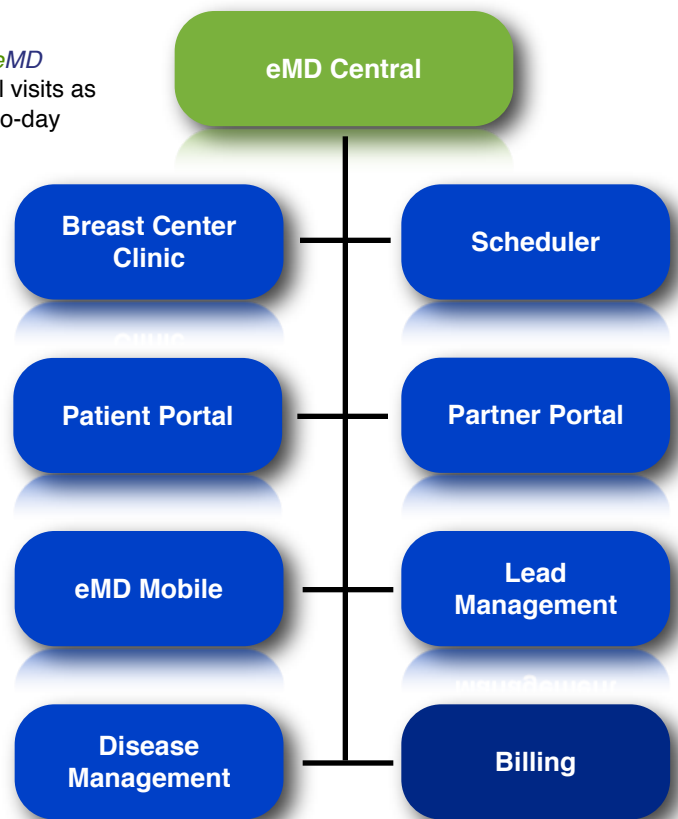

Disease Management Module contains functionality that allows efficient tracking of breast care patients, as well as the outcome generation associated with HMO Disease Management contracting.

Scheduler provides the ability to maintain schedules of resources and facilities. The application supports drag-and-drop, multiple time views of appointments, search for free time and resource filtering.

Partner Portal allows any HL7 compliant system to effortlessly share data with eMD Central. Data from EMR, laboratories, and dictation, for example, does not have to be re-entered, it is passed automatically into the system.

Lead Management, an integrated tool that helps you track and manage leads as they move through your practice giving you an accurate picture of the return on investment of your marketing dollars.

Billing, fully integrated with eMD Central, provides all the necessary information to bill the payer. It automatically puts in the billing software for resolution providing claims processing, electronic claims submission and receivables management.

Disease Management

The Disease Management Module contains functionality that allows efficient tracking of breast care patients as well as the outcome generation associated with HMO Disease Management contracting. Through the use of easy to see "stop lights" you can quickly assess the state of your patient and drill down to the information that really matters, reducing the time required to review history.

Our Company

Exemplo Medical, an industry leader in Electronic Health Record systems delivers robust and highly flexible Specialty Specific software for medical professionals to record, access and track patient and procedural outcomes. eMD Central provides a common base for each Specialty Specific module. Currently Exemplo Medical has specialized software created for Bariatrics, Nephrology, Breast Centers, Colorectal and Interventional Radiology. These modules offer care providers the opportunity to collect standardized clinical and procedural data, review and analyze results and shape program goals based on outcomes while working in an environment customized for their specialty.

Complimenting this clinical functionality are additional modules that increase practice efficiencies and patient communication. The software's flexibility enables providers to tailor the application to include additional data collection elements unique to their program and practice. eMD Central is HIPAA compliant while the eMD for Bariatrics specialty supports the SRC's Centers of Excellence requirements.
